

JOB DESCRIPTION FOR SR. FRONTEND DEVELOPER

The Senior Front-end Angular Developer position plays a critical role in our company. They are responsible for implementing the front-end logic that defines the behavior of the visual elements of a web application. They are actively involved throughout the project lifecycle, oftentimes starting with rapid prototypes early in the design phase. In some cases, the end goal is high-fidelity prototypes, but most of the time the developers will ultimately be writing clean, production-ready code, which will be integrated with the backend/APIs. Front-end developers will be supported by our back-end web developers, who are responsible for server-side application logic. They often work alongside other front-end web developers who specialize in markup and styling.

We are looking for a Senior Front-end Angular Developer who is passionate about design and programming. Responsibilities include implementing visual elements and their behaviors with user interactions. You will work with both front-end and back-end web developers to build all logic. You will also be bridging the gap between the visual elements and the server-side infrastructure, taking an active role on both sides, and defining how the application looks and functions.

KEY QUALIFICATIONS

- 5+ years working in front-end web development.
- Bachelor's/College Degree in Computer Science/Information Technology, Engineering (Computer/Telecommunication) or equivalent.
- Extensive programming experience in HTML5, CSS3, SASS or LESS, and Bootstrap, Foundation or Materialize.
- Excellent Javascript knowledge and programming experience with ES5/ES6.
- Solid understanding and development experience in Angular.
- Experience with Typescript.
- Experience with tools like Redux, Webpack, Angular CLI and/or Gulp.
- Experience consuming REST APIs .
- Experience with Object Oriented programming.
- Proficient understanding of client-side scripting and JavaScript frameworks, particularly Ionic and Angular.
- Familiarity with responsive design concepts and coding best practices.
- Experience with client-side architecture and design patterns.
- Awareness of cross-browser compatibility issues and client-side performance considerations.
- Solid understanding and extensive experience with version control tools like Git, SVN or Mercurial.
- Exceptional problem solving and ability to work independently.
- Exceptional learning skills.

- Passion to write great, clean, and efficient code.
- Fluency in both oral and written English.

JOB DESCRIPTION

- Plan and update Web design specifications.
- Provide suggestions related to the Design that will enhance user experience.
- Plan, build and update additional developments for the Mobile and Web.
